Dear Doc,

I am enclosing four drawings of the APN/59 radar. On these you will notice that the main indicator is enclosed in a square envelope, while the auxillary indicator has a more or less round face. We are proceeding on the assumption that the main indicator is the one you described as the primary, and that the auxillary is the one that you described as the monitoring scope. Unfortunately our drawings giving outside dimensions are for the auxillary, and we will have to try and find drawings for the main unit. We wonder if it would be easier for you to obtain these through James or some of your other connections.

We would also ask you to examine these drawings and confirm that our choice of indicator is the correct one.

Yours very truly,

HYCON MFG. COMPANY
